

6-way Modulating Valve

For use with paint temperature control systems

Designed to modulate water for accurate temperature control of paint when both heating and cooling are required.

Size 3/4 inch Saint Clair Systems Six way Temperature Control Valve

Close view of specially ported ball in partial open position. Both inlet and outlet balls are custom machined for full modulating service

- Mechanically linked to single actuator – cannot mix hot and cold water
- Nema rated electric actuator
- Custom Ported to minimize deadband between heat and cool
- 4 – 20 mA position proportional operation, any control source
- Zero backlash drive train
